19.1 GENERAL INFORMATION

19.1.1 Specific features

(1) Fuzzy control

(a) Response speed and stability are enhanced.

- The system automatically controls changes of return air temperature, set temperature and room temperature according to the fuzzy control.
- The system response speed, can keep room temperature constant, and can adjust room temperature to set temperature quickly.

(b) Elimination of temperature irregularity as the time of operation ON/OFF control

- The system finely controls the compressor to room temperature according to the temperature sensor, air conditions room temperature consistently and improves cooling or heating feeling in each room(or minimize influence of shutdown in other room).

(2) Super link system

- Non polar 2-core signal wires for indoor, outdoor units by means of the automatic polarity selection.
- In addition, the max. 48 units can be controlled with a pair of signal wires. The high speed transmission method same as the computer network system [start up of 48 units can be completed within a few seconds by the determination of operation mode and the start of operation].
- As separate power supplies for the indoor and the outdoor units are employed, a pair of 2 signal wires only are required for the inter connecting wiring of indoor and outdoor units regardless of the number of units so that the installation work can be simplified, the cost of wiring work can be curtailed and causes of wiring error can be minimized.

(3) Floor layout can be changed by resetting address unit number.

- For change of floor layout, the control group can be recombined only by resetting address unit number.

(4) Installation of automatic address setting function

- The address setting method are divided into three types according to wiring method: “Automatic Address Setting,” “Remote controller Address Setting” and “Manual Address Setting.” In case of the Automatic Address Setting, no address needs be set as usual.

(5) Connectable indoor capacity

Capacity from 50% to 130% is possible.

- FDCJ(P)140 type

Number of connectable units : 1 to 8 units

Connectable capacity : 7000 ~ 18200 W

- FDCJ(P)224 type

Number of connectable units : 1 to 13 units

Connectable capacity : 11200 ~ 29200 W

- FDCJ(P)280 type

Number of connectable units : 1 to 16 units

Connectable capacity : 14000 ~ 36400 W

(6) Cooling operation down to -5°C outdoor temperature

(7) Indoor units are available with 9 capacities, in 9 types and 54 models.

- 9 capacities...22(0.8 HP), 28(1 HP), 36(1.25 HP), 45(1.6 HP), 56(22 HP), 71(2.5 HP), 90(3.2 HP), 112(4 HP) and 140(5 HP).
- 9 types...Ceiling recessed type (FDT), 2-way outlet ceiling recessed type(FDTW), 1-way outlet ceiling recessed type(FDTS), Cassetteria type(FDR), Satellite ducted type(FDUM), Ceiling suspension type(FDE), Wall mounted type(FDK), Floor standing exposed type(FDFL) and Floor standing hidden type (FDFU).

(8) Vertical blow or horizontal blow type can be selected for the outdoor unit.

Standard

horizontal blow

Vertical blow

Using an adapter
(Optional)

(9) Long piping design offers One way piping length of 100 m

- Indoor and outdoor units can have a level difference of up to 50 m, with a one way piping length of up to 100 m. This is the top-class long piping design in the industry. A level difference of as much as 15 m between indoor units ensures that the system can meet a wide variety of air conditioning requirements in any building.

(10) Layout free refrigerant piping

The branch type piping makes the system flexible enough to satisfy any layout plan on the floor or in a room.

(11) Improvement of serviceability

- Failures of indoor unit and outdoor units are shown on the liquid crystal display on the remote controller.
 - Failures of indoor unit and outdoor units can be checked by remote controller.
- Easy checking of outdoor inspection LED.
 - The LED can be checked without removing the service panel, and faulty units can be easily identified out of several units.

Notes (1) The cooling and heating capabilities imply the values when the indoor unit of rated capacity is connected under the condition specified in JIS-B8616.

(2) The refrigerant quantity in the connecting pipe is not included Charge it additionally at the site.

(3) The number "2", following the type of each model, represents "CE-marked model" especially for European Union, and for European nations which require CE marking.

Refrigerant distributor pipe set Number list (Optional)

Outdoor unit	Number of combined indoor units	Flow divider pipe ⁽¹⁾ (Total capacity after the flow division)
FDCJ140HKXE2B	1~8	Downstream capacity 101 or less : DIS-2KX10-E
FDCJ224HKXE2B	1~13 ⁽²⁾	Downstream capacity 180 or less : DIS-2KX20-E
FDCJ280HKXE2B	1~16 ⁽²⁾	Downstream capacity 180 or more : DIS-2KX30-E

Notes (1) The flow divider pipe that should be used depends on the indoor unit total downstream capacity. (1 set is required for each flow division.)

(2) When there are 13 or more indoor units there are limits on the length of the piping after the flow division, so refer to the usage range.

(3) Operation chart

Since the Multi KX series air conditioner units are free multitype to which the indoor units of different capacity and different model can be combined, the operation characteristics of all combinations are very complicated, therefore only the individual operation characteristics of indoor and outdoor units are shown. For the combined operation characteristics, calculate them with the method shown in the next page.

(2) The values shown in the above table are common to both cooling and heating operations.

(c) Calculation of total operation characteristics

Since the operation characteristics of series Multi-KX depend on combination of indoor unit, calculate the total operation characteristics of the system by using the formulas below according to specifications of each indoor unit or outdoor unit.

1) Total power input

Total power input (kW) = Power input of outdoor unit + \sum (Power input of indoor unit)

2) Total running current

Total running current (A) = Running current of outdoor unit + [\sum (Running current) \times 2/3]

3) Total power factor

Total power factor (%) = [Total power input (W) / $\sqrt{3} \times$ Total running current (A) \times Power source] \times 100

Total operation characteristics = Operation characteristic value of outdoor unit + Operation characteristic value of indoor unit

[Example]

(Conditions) Operation Voltage Indoor unit: 220 V, 50 Hz
 Outdoor unit: 380 V, 50 Hz
 Operation mode Cooling and Heating
 Unit..... Outdoor unit: FDCJ224HKXE2B \times 1 unit
 Indoor unit: FDTJ71HKXE2 \times 2 units
 FDTJ45HKXE2 \times 2 units

Running current (A)	15.7/13.0	0.47/0.47	0.45/0.45

① Total power input (kW)

(Cooling) $9.8 + (0.10 \times 4) = 10.2 \text{ (kW)}$

(Heating) $8.3 + (0.10 \times 4) = 8.7 \text{ (kW)}$

② Total running current (A)

(Cooling) $15.7 + (0.47 \times 2 + 0.45 \times 2) \times \frac{2}{3} \doteq 16.9 \text{ (A)}$

(Heating) $13.0 + (0.47 \times 2 + 0.45 \times 2) \times \frac{2}{3} \doteq 14.2 \text{ (A)}$

③ Total power factor (%)

(Cooling) $\frac{10.2 \times 1000}{\sqrt{3} \times 16.9 \times 380} \times 100 \doteq 92 \%$

(Heating) $\frac{8.7 \times 1000}{\sqrt{3} \times 14.2 \times 380} \times 100 \doteq 93 \%$

(d) Calculation of system power input for operation hertz of compressor

Note (1) This package air-conditioner in JIS B8616.

$$\text{System's total power input (kW)} = A \times B + C + (D_1 \times N_1 + D_2 \times N_2 + \dots)$$
